# Autonomy brings welcome changes

While getting jobs is easy, some educationists doubt whether growth of students' potential is stunted by stopping them from going for higher studies. Dr Mythili P Rao, Principal of School of Graduate Studies, Jain College, says: "Courses that cannot be part of the curriculum are catered as value-added programmes." Such programmes result from a strong academy-industry interface and thus promise jobs.

Dr Easwaran Iyer, Dean, Commerce, Jain University, told *Deccan Herald* that conventional syllabus was neither industry-acceptable nor flexible. Being autonomous, Jain designs syllabi suitable for industry. Many students go for paid internships while pursuing their degrees.

**Jain University:**  
**'Earn While You Learn' - paid internships while pursuing their degrees. Strong academy-industry interface, flexible and student-friendly schedule**

After Jain became a University, curriculum is designed feeling the pulse of the industry. Integrated add-on programmes provide flexibility and vantage for students in a competitive industry.
